

Drawer Height Adjustment Instructions

sørenmobler

Drawers should look flush like the picture to the right

If the drawers are not aligned pull the drawer out and you will see the runners along the bottom - below picture. The drawer height can be adjusted up and down using the small cog – see arrow.

The drawer should be sitting flat on the runner as per below.

If the drawers are not aligned the drawer height can be adjusted up or down to suit. See below cog has been moved up to make the drawer sit higher.
