OPERA SWIVEL CHEST INSTRUCTIONS

When we transport the Opera Swivel Chest we screw the swivel base to the chest so it doesn't move around in transport.

- 1 - To release the locking screws you need to lay the unit on its side.
- 2 - Using a No2 Square Drive Drill or Screwdriver, remove the 2 screws which attach the swivel base to the cabinet.
- 3 - These screws are in the center are of the underneath. Do not remove the screws from around the edge which attach the base to the bottom of moulded frame.

There also will be @ 13mm hole which you will see a screw through as well – do not remove this as this is what attaches the swivel to the cabinet.
- 4 - Lift back into position and you are good to go!
